1. Oxygen transmissibility measured via polarographic method at centre -3.00D lens using boundary corrected, edge corrected Dk value. Units (cm/sec) (ml O₂/ml x mm Hg) at 35° C.

Important Safety Information: ACUVUE® Contact Lenses are indicated for vision correction. ACUVUE® OASYS Contact Lenses are indicated for vision correction and for use as a therapeutic lens. ACUVUE® VITA Contact Lenses are indicated for vision correction as a daily wear lens with one-month recommended replacement. As with any contact lens, eye problems, including corneal ulcers, can develop. Some wearers may experience mild irritation, itching or discomfort. Lenses should not be prescribed if patients have any eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. For refractive ametropia use, lenses should not be prescribed if patients have an eye infection or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. Consult the package insert for complete information. Complete information is also available from Johnson & Johnson Vision Care division of Johnson & Johnson Inc., by calling 1-800-267-5098 or by visiting jnvisionpro.ca.

Important Safety Information: ACUVUE™ RevitaLens Multi-Purpose Disinfecting Solution (MPDS) is indicated for the care of soft (hydrophilic) contact lenses, including silicone hydrogel lenses. Use this product, as recommended by your eye care professional, to disinfect, clean, rinse, store, remove protein and condition your lenses. If you are allergic to any ingredient in ACUVUE™ RevitaLens MPDS do not use this product. Problems with contact lenses and lens care products could result in corneal infection and/or ulcers and lead to loss of vision. It is essential that you follow your eye care professional's directions and all labeling instructions for proper use of lenses and lens care products, including the lens case.

*Helps protect against transmission of harmful UV radiation to the cornea and into the eye.

⁴**WARNING:** UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. **NOTE:** Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye disorders.
